Hi,
I tried Clipboard() in HomeBudget:
===
....
categories.WhenInsertRow = THISBACK(InsertCategory);

....
categories.Appending().Removing().Editing().Clipboard();

....
 == =
But When copy any multiple rows, only one row data can be done when "paste as Appended".
The SQL statement in recorded file show the data in cell are NULL:
"SQL* insert into CATEGORIES(GR_ID, NAME, DEFVALUE, PM, INNEWMONTH) values (4,
NULL, NULL, -1, 0)..."

Maybe it's a UPP bug?

I also noticed that the Paste and write to SQLite3 function can be coded as follows:
====================================
void gridctrl::Paste(int mode)
{
if(!clipboard)
return;
Gridclipboard gc = Getclipboard();
if(gc.data.IsEmpty())
....
=======================================
But what is the name(XXX) of the CALLBACK I can use like below:
categories.XXX = THISBACK1(Paste,a);

Thanks in Advance.
