Subject: Debugging doesn't work with 711-dev2, win32, and mingw Posted by Werner on Sun, 16 Dec 2007 08:25:56 GMT View Forum Message <> Reply to Message

While the debugging window is showing the function with the breakpoint in it (method, actually) and the disassembly seems ok, no variables at all, neither Watches, nor Locals, nor Autos, are being displayed.

Debugging externally and running says:

Quote:warning: while parsing target library list: not well-formed (invalid token)
