DropList's Add method append current item to the end. I cannot insert it to other places conveniently, such as the beginning.

I wonder what is the usage scenario of such requirement...

for simplicity, i capture my program and show you the situation.
i pulled down a DropList, and i sent 456 after 123, so 456 is shown under 123. Since it is a history list, i want to show recent items above.

I would keep it as separate list and "reload" it into DropList each time it changes.
