Subject: Repeated Question: How to use Clipboard in DB(SqLite3)?

Dear UPP experts,
Happy New Year!

I tried Clipboard() in HomeBudget:
==
....
categories.WhenInsertRow = THISBACK(InsertCategory);
....
categories.Appending().Removing().Editing().Clipboard();
....
 == =
But When copy any multiple rows, only one row data can be done when "paste as Appended".
The SQL statement in recorded file show the data in cell are NULL:
"SQL* insert into CATEGORIES(GR_ID, NAME, DEFVALUE, PM, INNEWMONTH) values (4,
NULL, NULL, -1, 0)..."

Maybe it's a UPP bug?

I also noticed that the Paste and write to SQLite3 function can be coded as follows:
==================================
void gridctrl::Paste(int mode)
{
if(!clipboard)
return;
Gridclipboard gc = Getclipboard();
if(gc.data.IsEmpty())
....
=====================================
But what is the name(XXX) of the CALLBACK I can use like below:
categories.XXX = THISBACK1(Paste,a);

Thanks in Advance.

During pasting grid should call WhenInsertRow for each inserted row. In theory everything should
be fine I'll check it ASAP

Hi Daniel,

Following is my testing details for above mentioned problem. It is also related to the discussion issue:"Range paste for Gridctrl".

1).Clipboard function added in HomeBudget only by one statment:
 ...
  categories.Appending().Removing().Editing().Clipboard(true);
 ...

2).Two categories groups created in execution.

3).Problem by single row copy&paste: (in group-1)
Select single row in "Categories" -> MB3 -> copy -> MB3 -> paste as appended.
It seems ok in table display. But,
Select another group -> select changed group again.
You can find the new paste doesn't been added in SQLite3 DB and display in table as well.

4).Problem by multiple rows copy&paste:
Select multi rows with "Shift" key -> MB3 -> copy -> MB3 -> paste as appended -> Select another group -> select changed group again. result (both in db & table):
last row is ok, 1st row missing, and first two column data of all other rows missing.

To save data to SQLite3, maybe I need to add addtional Paste routine in InsertCategory() and other functions especially for Clipboard data?

b.t.w. "Gridclipboard gc = Getclipboard();" doesn't work when I tried to add some codes.

Thanks for your help!   /Qinrong
