hi!

i just started to use upp and i have to say that it is a really excellent work!

now my question:
how could the background-color of a grid be changed? i know how to use GridDisplay (or at least i
think so) but this only changes the color of single rows.

the reason is, that i want to have a grid which background-color should be displayed like an
EditString with the NotNull-flag (no rows -> red background).

thanks and kind regards,
christian

Use global SetDisplay like this:
grid.SetDisplay(Single<MyDisplay>());
However bakckground will change only for rows. Empty space will still be filled with SColorPaper.
I'll try to fix it in the next dev.

ok thanks, i already tried this .. anyway changing the color of rows in order to show that there are
no rows is not usefull.)
