Please, add "documented/commented outside the code" option

Mirek

I like commented headers files (doxygen format).

drawbacks:
- it slows down compilation
- doc changes need code changes

advantage:
- simple to generate (doxygen)
- simple to maintain on API changes

Mirek
the question is about comments inside the code.

I would like to add that descriptivenes of function and variable names could also be improved. This would decrease the amount of comments needed to understand the code, but they would still be needed.

Well, I cannot promise to fix everything nor soon, but eventually you (and Arius) should put together a list of "bad" names.

It would break 20MB of my commercial codebase, but I am ready to go through that - if there is a really good reason....

...as for comments in the code...

...well, please let's defer this theme until Topic++ is finished and finaly integrated with class browser. I believe that my final vision is very nice and innovative.

Mirek

Shall we better start a new thread of topics in "Documentation" category where everyone, not happy with some namings, expands the lists by editing own posts?
And then we compare them?

Is not it rather "library wishlist"?
