Please tell me how to get latest Linux distributive. Official SF page contains only 2007.1 version. And I don`t know how to get sources from "secret" IP.

Use sources.

Recompiling theide is a matter of about 5 mouse-clicks Of course, some basic knowledge about packages/nests/assemblies might be handy, but any advanced U++ user should know them anyway...

Mire

Mire

BTW, the 'secret' IP now is less secret... just use svn !

Enter on a folder of your coice (usually ~/ or better ~/sources/) and do

svn co https://upp.svn.sourceforge.net/svnroot/ uppdev

And you'll get your 'uppdev' folder with sources, examples, tutorial and bazaar files.

Ciao

Max
