I get the error ...

"Error running process: The system cannot find the file specified."

Console program with a simple main routine returning int appears to compile but will not build.
Directories are empty, no source code and no object modules.

Appears to be an IDE problem. What am I doing wrong...? Otherwise everything is just peachy.

Amiel.

Amiel.

Are you trying to compile a package "New user"? If not, which one? Are you able to build and run any examples packages?

Post your ???upp file. And your main routine. I guess that you don't know the difference between Upp application and non-upp application... upp macro is missing? Have you got `CONSOLE_UPP` (or similar?) in your main? Can have a look in `Core/App.cpp` I'm just lazy at this time of the night to investigate deeper because you didn't post your test case... You can search with `Ctrl_Shift_F` the whole uppsrc to find if that kind of message exists and where.

Best regards, Aris

P.S I edited your topic name - was "New user". Imagine if everyone who has a problem names topic "New user"

Edit2: How have you created your package? From a template? Which one? if not, try from a template and compare the differences...

Hi,

It seems that this discussion thread has stopped some time ago already but I would like to get through this topic as I am facing a similar issue today.

I have downloaded and installed the u++ application (upp-win32-1205.exe). I configured it to use MSVC8 (Express Edition 2005)

To get started with the tool, I opened and tried to build the "days" example. Just as in the comment made in the previous user post, I am able to compile the cpp code of "days" example but I can't build the example and get an executable to run.

When I start building the example, I get the error messages hereafter included.

Could someone help me getting through this issue?

Thanks!

Norrin

Please check whether cl.exe is either in environment PATH or in "Executable" directories in Setup/Build methods for MSC8.

Thanks, It seems that was the problem...

I bumped into other missing components which I could fix by adding the path in executable/includes/libraries...

I'll give the example build another try...

Hi,

Still in the process of compiling "Days" example but making some progress..

The build is going forward now but unfortunately, I bumped into a linking error:

----- Days (GUI MAIN MSC8 DEBUG DEBUG_FULL BLITZ WIN32 MSC) (9 / 9)
pngreg.icpp
pngupp.cpp
plugin\png: 3 file(s) built in (0:08.35), 2784 msecs / file, duration = 10875 msecs, parallelization 100%
main.cpp
Days: 1 file(s) built in (0:09.13), 9133 msecs / file, duration = 15453 msecs, parallelization 1%
Linking...
uuid.lib(unknown_i.obj) : fatal error LNK1103: debugging information corrupt; recompile module

There were errors. (2:27.04)

Any idea what could the reason be for that error?

The problem looks like your tools are not installed correctly or they are not found.

You need Microsoft SDK and Visual Studio Express does not contain that. It is a separate download. Please check that you have done everything to install SDK: Instructions.

But first you should also check the contents of TheIDE's menu Setup/Automatic Setup. Post a screenshot here.

It is quite possible that during previous attempts, some file was left corrupted by SDK tools.

Try "bomb" - Build/Rebuild all. That will regenerate all files.

Hi,

Thanks for your reply... it is quite possible to have some remaining installation issues. I gave it a try and changed the build option from DEBUG to OPTIMAL and that passed OK then.

I am not sure why I could not build for debug though.

For SDK, I have installed it as you need it otherwise you could not get through the linking part.

You can also try "Build/Clean UPPOUT". That will delete ALL intermediate files.
