Subject: Navigate in file doesn't work for testcase

Hi!

1. I have a simple class implemented in a *. and a *.cpp. If I chose "Navigate in the file..", it works fine in the *.h, but it displays gibberish and cant execute a jump if I use it in *.cpp file.

2. If I extract the enum declaration from the class, Assist++ does not display the enum values in the autocomplete list.

3. Would it be possible in the dialog from "Navigate in the file.." to group somehow together the items from enum?

4. I just noticed that TheIDE uses ".." at the end of a menu name which opens a dialog. Any good reason why "..." is not used? It is standard, but not too important .

edit:
5. This is off topic, but since I'm posting now, how do you use Stream. I can't get to compile anything with it.
