Subject: Automagic default extension with multiple file types [FEATURE REQUEST]

Hi Mirek,

I have a dialog that gets setup like this

FileSel dlg;
dlg.Type("ESRI Shape files","*.shp");
dlg.Type("Google Earth files","*.kml");

if(!dlg.ExecuteSaveAs("Export Lines"))
  return;
...

and I would like the dialog to set the default extension depending on the currently active file type.
Is there already a way to do this please? Is it something you think would be good to add?

Cheers,

Nick

Current version of FileSel does it based on file mask. In this case, it would use either ".shp" or ".kml".

Mirek
