Help!

I've download SVN version 98.  
After this, I try to compile SQLApp.

TheIDE Says

plugin\sqlite3: 1 file(s) built in (0:00.92), 922 msec / file, duration = 932 msec

And same reactions on any SQL package.

Have you any ideas?

(UBUNTU 7.10)

In Win32, it seems OK (with either GCC and MSC). I will test in Ubuntu soon.

OK. Thanks. May be next release I can solve this problem.

I try work in windows.

May be I wrongly install on UBUNTU machine too many packages.

May be anybody try this build on any other LINUXes?

It's may be problem only on my system.

By the way, problem has been solved in SVN 101!  
Thanks.
