[View Forum Message](#) <> [Reply to Message](#)

This is the first attempt to get 2008.1 out. Please try it and report any bug you find. Enjoy

Changelog since 2007.1:
Will be updated tomorrow.

One little question.
tonight I've install build svn 104,

What of this (svn 104 and 2008.1beta) is older?

What of this (svn 104 and 2008.1beta) is older?

SVN is updated about daily, so it should be newer.

Ciao

Max

What's about exactly 2008.1beta and SVN104 ?

Subject: Re: Upp 2008.1beta released

sergeynikitin wrote on Fri, 25 January 2008 11:22What's about exactly 2008.1beta and SVN104 ?

Well, 2008.1beta is packaged for easy installation, SVN is just SVN, so you must build it yourself with a previous ide version.

If you're able to build it yourself AND if you want to stay in sync with latest devel (with maybe some quirks because of not fully tested code), SVN is better.

If you care more about stability and ease of installation, beta is better.

Personally I use SVN and it goes quite good. Before updating SVN repository I always build it on linux, so it **should** work good on it.

If you want to know exactly which svn (or uvs2) build goes on 2008.1beta, I don't know... maybe unodgs can answer to that.

Ciao

Max

BTW, any chance for Linux .deb release volunteers?

It is really simple

(If not, I will do Linux release ASAP).

I'm very glad for suggestion, and I found that programming process under Linux is more comfortable, but I don't know WHAT this do.

May be. (and i'm very pleased) If you consult me How to build Linux .deb package.

PS

(I'm not Linux professional, as seems to you)

(I think, that I'm professional in economical databases)

But I did not refuse (In this is my proposal)

I try my linux muscles, and I create .deb from svn 104.
Test pls.

This link to download page <http://www.svsoft.ru/upp.php>

And I upload RPM. Test it too. (test only install ability)

After will be OK, I build more carefully.

Posted by [bytefield](#) on Sat, 26 Jan 2008 09:26:43 GMT
[View Forum Message](#) <> [Reply to Message](#)

Hi sergeynikitin. I've tested your deb package and it works properly. Guess Mirek want to use the 2008.1beta archive from Sourceforge, not the svn. In that case all users share the same code. Currently your build is 801.r100. So you may use the 2008.1beta package and build again.

Please, don't forget to generate Makefiles for TheIDE, it is not present inside the current archive.
Will the release sources be available as tar.gz again?

I am asking for FreeBSD port preparations.

Matthias

Matthias

Yes, please!

Some Debian upgrade resultet in the ide segfaulting. No luck with binaries from older releases
either. So I'm currently screwed

Finally I'll build me a new shiny box. Solaris, here I'm coming. Linux can go to hell, as far as I'm
concerned

[View Forum Message](#) <> [Reply to Message](#)

I'm only now reading the full thread and see the embedded deb package. In fact it works and saves my day, thanks
Still, my wine was not in vain. Backwards compatibility has been broken in some subtle way in latest Debian. Big concern.

Guido

[View Forum Message](#) <> [Reply to Message](#)

If I run an application uppsrc/DropGrid/main.cpp and drag a file over the left box, which is a GridCtrl I believe, I'm getting an assert below.

"Assertion failed in uppsrc/Core/Vcont.h line 17
i >= 0 && i < items"

I'm just wondering if that is a problem.

Some bugs:

1: Installing on a PC with MSC71 installed, in "Build methods setup" the SDK directory is filled in the MSC8 section (see the screenshot)

2: In DropList, there is a gap between the drop button and the right border of the control (see the screenshot)

The screenshot:

unodgs wrote on Fri, 25 January 2008 04:32
Changelog since 2007.1:
Will be updated tomorrow.

Well, here is the "combined changelog":

- * new Core with better threading support. More here
<http://www.ultimatepp.org/forum/index.php?t=msg&th=2189& amp; amp; amp;start=0&>
- * init_ and GLOBAL_ changes. More here
<http://www.ultimatepp.org/forum/index.php?t=msg&th=2202& amp; amp; amp;start=0&>
- * RichEdit now support overwrite mode (Insert key...)
- * new methods Ctrl *GetOwnerCtrl() and const Ctrl GetOwnerCtrl() const
- * first iteration of Drag and Drop in Ctrl (currently only for win32) More here
<http://www.ultimatepp.org/forum/index.php?t=msg&th=2222& amp; amp; amp;start=0&>
- * added Ctrl::OverrideCursor(const Image& m) - Overrides the image of mouse cursor.
- * Ctrl now detects and delivers some new mouse events. More here
<http://www.ultimatepp.org/forum/index.php?t=msg&th=2228& amp; amp; amp;start=0&>
- * modal loop handling changes. More here
<http://www.ultimatepp.org/forum/index.php?t=msg&th=2230& amp; amp; amp;start=0&>
- * added Ctrl::ChildFrameMouseEvent(Ctrl *child, int event, Point p, int zdelta, dword keyflags) for controlling child's frame mouse events
- * GridCtrl now supports merged cells (see JoinCells and JoinFixedCells methods). Fixed some bugs.
- * PostgreSQL support! (thanks to ZSolt)
- * many Drag & Drop improvements. All edit controls as well as TreeCtrl and ArrayCtrl now support it.
- * ArrayCtrlDnd reference was added
- * fixed MaxLen restriction in edits.
- * PostgreSQL now supports EnumView, EnumSequences and EnumTables. GetColumns should also work.
- * InnerJoin, LeftJoin, RightJoin, FullJoin and On methods were added to SqlExp interface to allow do joins in sql-92 way. Old way (which work only in Oracle (and probably in Firebird)) are naturally still available.
- * as MinGW does not support TLS variables, it now compiles as "USEMALLOC" in MT mode
- * IconDes: Insert from file operation was added
- * TheIDE now accepts file drops
- * ColumnList supports drag & drop
- * fixed rotated text problem (DrawText with angle) in X11
- * fixed problem with Ctrl+1 - Ctrl+0 keys in X11
- * ArrayCtrl and TreeCtrl support showing small popup if cell's width is not enough to display the text. It can be switched off by NoPopUpEx()
- * Code editor highlights Sql functions, boolean expression, U++ macros and text in upper case. Default color is black. Change it see the effect
- * Code editor marks edited lines as well as lines with warnings and errors (Ralf - Zardos)

- * initial support for drag & drop in X11. Small stability fixes to win32 drag & drop.
- * Markers of changes in code editor! (by Ralf) + highlighting error/warnings/found in files lines.
- * New QuickTabs
- * Windows installer should work properly now (theide.exe is not hanging on process list)
- * Postgres and As() fixes (by ZSolt)
- * Fixed some problems with TreeCtrl (by Mrjt) More here:
http://www.ultimatepp.org/forum/index.php?t=msg&goto=9592&#msg_9592
- * HomeBudget crashed when sql exception was thrown. Fixed.
- * Some GridCtrl fixes (see internal changelog)
- * Drag and Drop interface slightly refactored
- * Delayed clipboard rendering support
- * Topic++ integrated into main Ide window
- * Reduced code size produced by png plugin
- * GridCtrl - fixed text wrapping, added HeaderAlign* methods
- * MYSQLDLL - This new MySql package flag forces linking with .dll version of MySql client library.
- * IconDes import file is now able to import multiple files
- * Maximum number of "varargs" extended to 40
- * Added EditField::AlignRight
- * Extended DateTimeCtrl customization abilities
- * Fixed crashing Run() in PostgreSQL
- * Added ArrayCtrl::SetCtrl()
- * New Image cache ops. More here
<http://www.ultimatepp.org/forum/index.php?t=msg&th=2468&start=0&>
- * Small ToolBar improvements (Wrap(), NoWrap(), SetButtonMinSize(Size))
- * Some macro enhancements for TheIde. More here
<http://www.ultimatepp.org/forum/index.php?t=msg&th=2513&start=0&>
- * GetHomeDirectory, GetHomeDirFile now working in Win32
- * Grouping in QuickTabs (not fully finished)
- * SqlExp operator | now produces correct output for PostgreSQL
- * fixed compiling SQL_PostgreSql reference (Bas)
- * optimized painting when there is a lot of out of screen widgets
- * TabCtrl now supports Insert and Remove of tabs
- * FileSel is now using icons from windows
- * multidisplay support (in Windows)
- * LOG improvements More here:
<http://www.ultimatepp.org/forum/index.php?t=msg&th=2670&start=0&>
- * fixed ScrollBar::MinThumb(int sz) - there was not return value
- * many DropGrid improvements (but still no documentation)
- * fixed couple of bugs of GridCtrl (see changelog.txt)
- * PostgreSQL: Dialect now renamed to PGSQL, PgSequence now represents PGSQL SEQUENCE object.
- * PostgreSQL: DUAL_PRIMARY_KEY was not working, added support for binary columns
- * SqlExp Select statement now has "Get" variant to be used instead of "From" to get

"table-less" select, like "select nextval('seq')". In Oracle, Select(NextVal(SEQ)).Get gets translated to "select seq.nextval from DUAL", in PGSQL to "select nextval('SEQ')".

- * -M theide commandline option generates Makefile
- * Help Window is no longer a Window, but is now integrated into theide main frame.
- * "Close all tabs" and "Close non-project tabs" feature of tabs is now implemented
- * DropList dropfocus mode is now default, added NotNull, fixed refreshing right button after

closing popped list

- * Fixed memory allocator connected with limit on a total number of virtual memory blocks
- * Fixed QuickTabs crash related to group change, reduced space between icon and tab name
- * GridCtrl now supports inserting after/before and duplicating rows
- * Change in Image interface <http://www.ultimatepp.org/forum/index.php?t=msg&th=2579&>

amp; amp;start=0&

- * Added simple static widget DisplayCtrl
- * Added FileSel preview
- * Added SqlArray::ReQuery()
- * Added CPU_Cores() - returns the number of CPU cores in system.
- * New widget DropGrid <http://www.ultimatepp.org/forum/index.php?t=msg&th=2610&> amp;

amp;start=0&

- * Improved build performance

- * MingGW updated from 3.4.2 to 4.2.1
- * SDL updated from 1.2.7 to 1.2.12
- * Sqlite updated from 3.3.0 to 3.4.2
- * PCRE updated from 7.0 to 7.3
- * added close group to quick tabs popped menu
- * "Insert any file" in TheIDE hotkey changed to Ctrl+Shift+O(because of conflict with Italic in

T++ editor)

- * those pesky icon.ico files wrong exports are no more generated from .iml
- * fixed a problem with unnamed image in .iml causing iml loss
- * added -gstabs flag for mingw - this is supposed to solve the problem with mingw 4.2

debugging

- * fixed potential crash in ArrayCtrl::AddColumn
- * FileSel types change if there is an empty "DefaultExt", extension is now taken from the "file type" droplist, from the first mask.
- * fixed clipping in Ctrl::GetTopRect
- * fixed painting LabelBox image at incorrect y-coord (mrjt)
- * fixed ArrayCtrl::NoBackground (mrjt)
- * fixed segmentation fault on Ubuntu Feisty (mdelfede)

- * fixed problems with GUI and the new sqlite3 (thanks to dmcgeoch)
- * Sql::Begin and SqlSession::Begin now perform ClearErrors
- * added void Sql::Get(Fields fo) More here:

<http://www.ultimatepp.org/forum/index.php?t=msg&th=2719&> amp; amp; amp; amp;start=0&

* added String SqlSession::GetErrorString(). Some databases like Postgres return "stringed" error codes.

* added SqlSession::WhenDatabaseActivity(ActivityStatus status) callback. Status can be (for now) EXECUTING, END_EXECUTING, FETCHING, END_FETCHING. It can be used to react on database activity (for example mouse cursor can change then, progress bar can be displayed and

so on)

- * fixed QuickTabs highlighting problems
- * added popuped menu with Close item to QuickTabs
- * added network browsing class NetNode (for now, in Win32)
- * EditField::NullText now has variant with Font parameter
- * added EditField::SetInactiveConvert(Convert &c) - allow to set convert class used when focus is out of edit field
- * added Image Win32DllIcon(const char *dll, int ii, bool large) to retrieve icon as image from given dll file.
- * fixed Splitter SetMin which wrongly used the 10000 ratio instead of pixels. This new method should use directly pixels....
- * almost all calls to Win32 API in Core are now implemented to use unicode variant (like CreateFileW)
- * painting Image for low-level machines was optimized
- * fixed 2 regression bugs of DateTimeCtrl. More here:
<http://www.ultimatepp.org/forum/index.php?t=msg&th=2773&start=0&>
- * TheIDE Ctrl+F1 now searches help for the current word
- * added value parameter to ArrayCtrl::SetCtrl. More here:
<http://www.ultimatepp.org/forum/index.php?t=msg&th=2779&start=0&>
- * added IdCtrls - a new very small utility class, modeled after SqlCtrls. More here:
<http://www.ultimatepp.org/forum/index.php?t=msg&th=2780&start=0&>
- * fixed a problem in CtrlCore which prevented closing the window with long operations and many timer events
- * many DropGrid fixes (resizing problems, null value caused selecting first item on list) and GridCtrl fixes (multiline highlighting is now supported, item editable state is now respected when ctrls are shown)
- * Going into Help (pressing F1 or icon/menu) now does not change the tree or topic.
- * F1 in help now has the same effect as pressing Ctrl+Tab
- * Win64 support (library only)
- * Automatic setup in TheIDE now supports (auto-installs) MSC8 - x64 compiler
- * Drawing now supports Null
- * Fixed GetMinSize in .usc
- * Layout Font property height now zoomed
- * "init" files in packages. More here
<http://www.ultimatepp.org/forum/index.php?t=msg&th=2834&start=0&>
- * Fixed "Writes to freed blocks" bug in ide
- * Added ProgressIndicator::SetColor
- * Added ASSERT_ macro - ASSERT with "message" parameter. U++ will now tell you what is wrong with your Value conversions
- * New widget MultiButton
- * added void Ctrl::LayoutId(const char *s) to put the name of layout variable into the Ctrl
- * There is now much improved chameleon support for DropList, DropChoice, DropGrid, DropDate, DropTime and EditField for Windows Vista
- * StaticRect enhanced to support Ch Values
- * Added chameleon utility functions to add and remove margins from rectangle
- * Chameleon can set now style for individual components of composite widgets
- * IconDes / .iml changed to premultiplied format

- * Added BackPaintHint. More here

<http://www.ultimatepp.org/forum/index.php?t=msg&th=2867& amp; amp;start=0&>

- * Fixed Upp to work in Linux again
- * DateTimeCtrl replaced by DropDate and DropTime
- * Improvements to painting system
- * Many fixes to GridCtrl and DropGrid

- * Going into Help (pressing F1 or icon/menu) now does not change the tree or topic.

- * F1 in help now has the same effect as pressing Ctrl+Tab

- * Win64 support (library only)

- * Automatic setup in TheIDE now supports (auto-installs) MSC8 - x64 compiler

- * Drawing now supports Null

- * Fixed GetMinSize in .usc

- * Layout Font property height now zoomed

- * "init" files in packages. More here

<http://www.ultimatepp.org/forum/index.php?t=msg&th=2834& amp; amp;start=0&>

- * Fixed "Writes to freed blocks" bug in ide

- * Added ProgressIndicator::SetColor

- * Added ASSERT_ macro - ASSERT with "message" parameter. U++ will now tell you what is wrong with your Value conversions

- * New widget MultiButton

- * added void Ctrl::LayoutId(const char *s) to put the name of layout variable into the Ctrl

- * There is now much improved chameleon support for DropList, DropChoice, DropGrid, DropDate, DropTime and EditField for Windows Vista

- * StaticRect enhanced to support Ch Values

- * Added chameleon utility functions to add and remove margins from rectangle

- * Chameleon can set now style for individual componenets of composite widgets

- * IconDes / .iml changed to premultiplied format

- * Added BackPaintHint. More here

<http://www.ultimatepp.org/forum/index.php?t=msg&th=2867& amp; amp;start=0&>

- * Fixed Upp to work in Linux again

- * DateTimeCtrl replaced by DropDate and DropTime

- * Improvements to painting system

- * Many fixes to GridCtrl and DropGrid

- * QuickTabs refactored to use system theme to paint tabs

- * Implemetation of DateTimeCtrl moved to header

- * Added Build/Clean package to packages popup menu of TheIDE

- * U++ translated to Finish (Tom1)

- * Chameleon styles now have "Standard" method which returns the "default" initial value of the style

- * BackPaintHint replaced with GlobalBackPaintHint. More here:

<http://www.ultimatepp.org/forum/index.php?t=msg&th=2890& amp; amp; amp;start=0&>

- * HeaderCtrl can now move (reorganize) tabs

- * ArrayCtrl sorting. More here: <http://www.ultimatepp.org/forum/index.php?t=msg&th=2896& amp; amp; amp;start=0&>

- * TheIDE i18n export refactored. More here:

<http://www.ultimatepp.org/forum/index.php?t=msg&th=2905& amp; amp; amp;start=0&>

- * TheIDE exe size fixed
- * Fixed Ctrl::Accept to work properly with TabCtrl sheets.
- * Some DropGrid/GridCtrl fixes/additions.

* Chameleon styles now have "Standard" method which returns the "default" initial value of the style

- * HeaderCtrl can now move (reorganize) tabs
- * ArrayCtrl sorting
- * simplify translating in TheIDE. More here

<http://www.ultimatepp.org/forum/index.php?t=msg&th=2905& amp; amp; amp;start=0&>

- * ConvertInt64, EditInt64
- * Toolbar buttons now can have labels
- * some Hydra fixes
- * Visual Studio 9.0 (2008) compiler supported
- * fixed Debugger going to wrong file at startup
- * EditField, WithDropChoice, Bar, MenuBar, ToolBar, StatusBar, MenuBar visual improvements (Vista, GTK)

- * BLITZ heuristics altered. More here

<http://www.ultimatepp.org/forum/index.php?t=msg&th=2986& amp; amp; amp;start=0&>

- * added BlueBar skin
- * Bazaar is now part of release (it contains experimental docking system for now)

I am hoping to use this list to extract the list of major changes....

Mirek

Could you please

- 1) Apply a patch for building UPP from Visual Studio project files to the official UPP source code.
- 2) Put missing uppsrc/ide/Builders/init under VCS.

Thanks.

Novo wrote on Wed, 05 March 2008 22:37 Could you please

- 1) Apply a patch for building UPP from Visual Studio project files to the official UPP source code.
- 2) Put missing uppsrc/ide/Builders/init under VCS.

Thanks.

Working on it. I got stuck because of some issues. Will report shortly.

Mirek

```

Not in release.

I guess we are still hitting the same problem - the content of full source tree is not what is released. There are some historic packages kept because of backward compatibility needs or just for informational purposes; these should not be part of any official release.

Anyway, rest should be now fixed.

Mirek

I've checked SVN rev. 187 and found several problems.

- 1) uppsrc/Updater still has problems.
- 2) uppsrc/plugin/png/pngreg.icpp seems to be included twice somewhere, and it needs to be guarded.
- 3) uppsrc/ide/Builders/init is still not under VCS.

BTW, I know it's not very important for us who already do use U++, but on the home page the last "Ultimate++ News" is from "2007-04-11 U++ 2007.1 released". That's almost 1 year old.

I think presenting 2008 beta there would be a good signal for newcomers.

Also I think this beta has been out long enough and it would be nice to get some more fresh beta to work toward RC soon.

Yes, I agree. We got somewhat stuck this time, each time it looks like we are going to go beta2, important issues arises to be fixed... (and I wanted to update the page at beta2 too...)

Mirek

Well, betas are just what the name say.... quasi-stable releases, and I think Upp is by far more stable and usable than many many other betas around !

In any case, KDE is fixed, which means the "problem queue" is for the moment empty.

I think it really is time for beta2 now.
