Hello!
How to send broadcast message for all computers of local network?

Example:
Work good

String host = "192.168.0.11";
ClientSocket(sock, host, _port, true, NULL, 5, false));

but

String host = "255.255.255.255";
ClientSocket(sock, host, _port, true, NULL, 5, false));

broadcast not work.

Thanks!

I'm no network guru, so I'm just replying because nodoby else already did.

If your subnet mask is 255.255.255.0, have you tried to use 192.168.0.255 as broadcast address?

David

I think so.

TCP/IP requires an established connection... which is more-or-less impossible through broadcast.
I don't think you can have a one-to-many relationship with TCP/IP.

UDP is sort of a fire-and-forget way of sending information through a network, so you can easily
set up one-to-many communications with it (since via UDP, you do not necessarily care about
responses).

I wish I could help you, malya, but I don't know enough about network broadcasting yet.

I took a peek here for a little more information about broadcasting on a network.

It looks to me like 255.255.255.255 should work, if you only intend to broadcast locally, unless
there's something else funky going on. I'm guessing there's a setting not quite right.
