SVN UPDATE & .deb BUILD : Revision 113 - 2008-02-05

Update on uvs2 versions :

uppsrc - 2415
reference - 109
examples - 133
tutorial - 37

Corrected 2 small bugs in ArrayCtrl.h and BlueBar.cpp
Patched Install.cpp to match svn .deb packaging

Letest builds available here :

http://www.ultimatepp.org/svnbuilds

Ciao

Max

Hi Max.
I believe is better to put all these builds in one topic. It is easy to everyone to find out the latest build (last post) and having builds in one topic will not flood "Ultimate++ community news and announcements" forum.

Already thought aout it.... I added new post just to show changes in svn and deb builds, as explained in previous post. From now I'll update it here.

Hi,

I have just noticed interesting problem (IMO).

It might be an issue of my tinkering with my new ubuntu server, but I believe that the right for usr/share/upp[-svn] are not set correctly. If I log as another user than the one that installed U++, I cannot access the content of directories.

Not quite sure what is problem, but I think this requires further investigation.

Mirek

View Forum Message <> Reply to Message

The problems solves in two ways:
1. make the users of U++ part of the same group

or

2. changing other users acces rights
(chmod -R u+rwx,g+rwx,o+rx /usr/share/upp-svn)

Guess it should be put in upp-svn.deb installation script.

mhhhh.... you mean that you can't READ or that you can't WRITE /usr/share/upp contents ?

Im my PC permission allows reading for all people, and writing only to whom installed stuff, what is indeed incorrect as files should belong to root and not to user.
Because of that the files are copied in home dir on first ide launch.
So, in either case the problem is there; if you can't read files, that's a urgent one, if you can't just write/delete files in /usr/share, that's not a big problem.
The right way should be indeed to make /usr/share/upp files owned by root and public readable.

Direct Link

Did you follow theide naming rule of svn builds ?
It must be 'theide-svn', otherwise the default install path (which should become 'upp-svn') is wrong.

I'll put my build scripts on svn on next days.

The executable name is theide-svn, like in other upp debian builds.
Main installation directory is /usr/share/upp-svn and after running theIDE, user installation directory is /home/<user>/upp-svn and theIDE configuration directory is /home/<user>/.upp/theide-svn.
I guess it behave like your builds.
Is something wrong?

MAINTENANCE RELEASE - WORKAROUND FOR BUG ON UBUNTU HARDY

Update on uvs2 versions :

uppsrc - 2527
reference - 112
examples - 140
tutorial - 38

plus 2 small patches to allow theide to run on ubuntu hardy (and I guess others gcc 4.2.3 distributions too).

NOTE : That's just a *workaround*, no guarantee that'll work for you !
If you need to have an svn release that doesn't have the bug, please stay on SVN218, which is built on previous ubuntu release.

As a solution for Ubuntu hardy bug, which turned out to be a compiler bug, the default optimization for release build has be changed adding -fno-inline-functions.

NOTE : If you build from svn source, please change build optimization accordingly; not doing so theide will crash.
Do so in SETUP-BUILD METHODS-OPTIMIZE FOR SPEED line, adding at end
-fno-inline-functions

BYTEFIELD, please change your optimization too BEFORE building 32 bit package.

Debian 64 bit build available here :
http://www.ultimatepp.org/svnbuilds/upp-svn_SVN.224_amd64.de b

Debian 32 bit build available here :
http://www.ultimatepp.org/svnbuilds/upp-svn_SVN.224_i386.deb

Please test both to see if bug is completely gone !

Ciao

luzr wrote on Mon, 05 May 2008 13:29Sorry about that, my fault.

Mirek

If this is an easy fix, could you post to SVN soon so we can update? Thanks.

Hi,

FYI, this version does not run on my ubuntu 8.04 system.
Did you change your optimization settings as advised by Max?

Gertwin

Thanks for info . I've used Massimo scripts, and first time when I've built SVN.224(I guess) I set the option, but now after scripts have been updated, the script take care about *.bm file, so it use -fno-inline-functions options by default and I've used SVN.226 build to make this last package and FYI on my Ubuntu 8.04 it works without problems. If you say so i will remake the package and upload it in few minutes.
Thanks,
Andrei

Edit: SVN.224 worked?
Have anyone else tried SVN.226 build?

How can i get svn repository and can compile this on win32.
From sourgeforce I can see in web browser... but i cannot download with TortoiseSVN. Maybe is other program can be download. And I use in kubunt too.. what program i can download svn.
Thank you!

Quote:How can i get svn repository and can compile this on win32.
You need subversion (TortoiseSVN) and guess there is a Tortoise entry in explorer menu for checkout. Do not fill entry of dialog which appear with full svn command found on sourceforge, it is only for CLI clients, use only the url found in command.
Quote:And I use in kubunt too..
For kubuntu you can use a SVN client with GUI or simple use svn from CLI, doing a simple checkout, like is described on sf or wiki.
CLI svn client is found in subversion package, so open a console, type Quote:sudo apt-get install subversion and you get a CLI svn client, after that follow the steps described on wiki.

To compile it set an entry to new uppsrc directory from svn repository in assembly list from "Select main package" dialog, in theide.

P.S.: if you want latest svn package you can use mdelfede builds for a 64 bit machine, or mine for 32 bits. (Linux only)
P.P.S: if we speak same language please send me a pm and I give you detailed instructions, if you have trouble.

[quote title=bytefield wrote on Wed, 07 May 2008 23:18]Ok, new 32 bit SVN.228 package is online.
It is available here.

Sorry, this package has the same problems.
The last version i used on 8.04 was (i think) the latest you build on 7.10, with an older gcc dependency.
I just upgraded that installation with this package.

Edit:
Problem solved, it is working now.
I renamed the upp-svn directory created by the previous version, SVN.228 created a new one, that solved my problem.

Thanks.

Gertwin

tutorial - 38

Corrected Valgrind parameter

BAZAAR CONTRIBUTIONS ADDED

From this release, I've included Bazaar stuffs in ide setup; bazaar files get copied on user folder (on demand) and a new assembly is added, MyApps-Bazaar.
This new assembly contains all MyApps nests as before, plus Bazaar nest; selecting this assembly you can also test bazaar user contributions.
I kept separated from MyApps assembly just to not confuse people... bazaar files are non (yet) as stable as upp, and need some cleanup.

Please test this release and feel free to comment / suggest some better way to include bazaar.

NOTE : After enough testing and (when needed) bugfixes, bazaar contributions will probabily merged with upp sources.

There is no libstdc++6-dev in Debian.
Only libstdc++6 and libstdc++6-4.1-dev, libstdc++6-4.2-dev, libstdc++6-4.3-dev

PS:
Now, I'm not sure if libstdc++6-dev should exist as alias in the repository. Debian gcc maintainer to blame?

libstdc++6-dev was the problem I've meet when testing Upp on Ubuntu 8.10 (Intrepid Alpha 1). Seems our deb packages have this in dependencies and new Ubuntu doesn't include it(and guess it also don't have such an alias), package manager bother about it (I cannot provide exact error, because I'm back to 8.04). U 8.10 will merge some packages from Debian, so i believe this is the

reason why my deb package work in U 8.04 and don't work in U 8.10.

Hello! I just moved to Debian Lenny and I want to keep learning and using Ultimate++.

Have anyone solved the above problem? I installed build-essential and everything is fine, but try to install the upp deb file it will not because of the libstdc++6-dev dependency problem.

Thanks
