Subject: DropList SetFrame appearance problem

Hello,
I've just rebuilt my application written in U++ in UPP2008.1beta and have noticed that calling SetFrame on DropList causes appearance problem. On the picture attached I called drop.SetFrame(ThinInsetFrame()), but there is little difference also in calling drop.SetFrame(InsetFrame()) for example. If there is no SetFrame at all DropList displays correctly. Last build where everything was OK for me was 709-dev1, but there are too many changes in the sources of DropList since the time for me to realize where the problem is.
Thank you for your help and for Ultimate++ also, it's great

Gabi

Things has changed for DropList in order to support Vista Look.

Anyway, we tried to keep legacy behaviour. Do you think you can prepare a test package to demonstrate the problem? (Sure, I could perhaps do it myself, but it would be a great help).

I did a very quick one to test it myself. Oddly, if you use AddFrame it works correctly

mjrt: Thanks for providing your test case. Application on picture I've sent before is roughly the same. My real application is much bigger, of course

OK, fixed.

Quick fix:

CtrlLib/MultiButton.cpp 368

```
 if(ComplexFrame()) {
  cr = GetSize();
  cr.left = lx;
  cr.right = rx;
  r = cr;
  paper = HasFocus() ? SColorHighlight() : SColorPaper();
  if(HasFocus())
   text = SColorHighlightText();
  w.DrawRect(r, paper); // <<< add this :)
 }
```
