Subject: ArrayCtrl - How to Cancel EditMode? And other Problem

Hello,

I have some problem with the EditMode. If I use SetEditable(false), the user can't select a row for highlighting. If I use SetEditable(true) I found no way to block the EditMode. EndEdit() is private...

Is there a function which allows the selection when SetEditable(false)? Or must I overload LeftDown() to get what i want?

greetings
loki

Ok. Seems as if my english is very poor   Sorry

Question 1: How can I cancel lineedit in WhenStartEdit ?

Question 2: Why is selection with LMB and resizing of the tabs ignored when SetEditable is set to false? It seems to me that here is something wrong, because I can select a line with RMB and I can resize the tabs in the HeaderObject. Also the mouseimage changes to indicate sizing of the tab.

I think that here are too many tests to "IsReadOnly()".
These tests should be removed from all input-functions and should only be used in functions which create or manipulate something.
StartEdit and DoInsert are candidates.

In my actual program I need to be able to switch between editable and not-editable state. But in both states the user must be able to select a line, because each line contains extra data which is displayed in an extra Ctrl.

Here is a testcase and a modified version of ArrayCtrl.cpp

I think you are right.

Anyway, I will not consider this before the "stable release" is out.

Please remind me then

We can add it to next "dev" release...
