Sorry for my English (and for my probably stupid newbie question =), I'm just a student from Russia and don't know it very well for now.

I'm using your great Ultimate++ just a week and don't understand some (probably basic) aspects of Upp. For example, there are a TabCtrl and some layouts for it's tabs in my project. But sometimes these layouts have a fixed and more bigger height (I need it).

And my question is: how I can add opportunity of scrolling to tabs content? Probably, I can need in additional frames, but please help me with a little code snippet or tell in what direction I have to dig.

Thank you,
Anton.

See attached package (Ignore the code in CtrlLibTest.h, everythng you want is in main.cpp, except for the layout).

Basically, just a ScrollContainer class. Instead of adding your ctrl to the TabCtrl, add it to the ScrollContainer, then add the ScrollContainer to the TabCtrl. Thats it .

James
