I would like to test for file type. Mainly I want to check whether a file is binary or text. What is the best way to do this?

Actually, the difference between a text file and a binary file is not really present in it's hardware or filesystem representation (at least not under the OSs I know), just in the way we write read from it. It is just a formal difference. Still, if you want only ASCII text, you can read the file and check if all the characters are alphanumeric plus punctuation signs.
