Hi. I saw the tray icon menu in Linux is showed in mouse position (like in Windows), and guess it must be on left-bottom side of tray icon. So i made these changes to sources:

TrayIconX11.cpp, line 166

MenuBar::Execute(this, THISBACK(DoMenu), Point(GetRect().left, GetRect().bottom));

Guess it is normal behavior, like others applications does(in Linux). Hope i don't wrong. Here it work well.

what if the tray is on top of screen?
(I have tray on bottom like in windows, but I'm not sure if Ubuntu by default in Gnome has the tray area in the upper panel.)

Well, after a check-up it seems to be better let as it was.
If tray is in left, right or top it work well, but on bottom it doesn't. So is better let it unchanged, even it hasn't the same behavior as native applications.
