When I add in Watches some String, there is no usefull info, only <error type>. Is it bug or feature?
(upp 2008.1beta)

I believe it is related to MINGW's inability to properly handle debug information regarding templates. Try with MSC.

Is there any workaround within mingw?

Seems to work for me (but at the same time, I took the chance to improve String debug info to work better with GCC).
