Hi,

I like to implement a child ctrl stack within another ctrl, i.e. all child ctrls overlaying each other. I add all child ctrls in the parent ctrl constructor, then the last added ctrl is the shown one in parent ctrl.

How can I enable and show a specific child ctrl inside this parent ctrl after the app has started, I tried with Enable(), Show() functions, but its not working?

Not quite sure I understand, but Hide others Show/Hide does not bring it to top, but simply hides or shows it. Putting more widgets on the same place and use Hide/Show to show only single one is quite commong practice in U++. E.g. TabCtrl works that way.

Hi Mirek,

thanks for replying.

So you say I have to loop over all child ctrls to get a specific one onto top?

I guess this has to be done anyway .

Matthias

Actually, if you really want to move it to top, Remove and Add it again...

But Hide/Show loop is more effective IMO.
