Subject: [BUG?] Black background in QTF embedded PNG-image
Posted by Mindtraveller on Fri, 29 Feb 2008 00:09:01 GMT

I've got StaticText control, which is working as some kind of labelled status indicator
(picture+text).
Picture is PNG-image from .iml file, with alpha-channel.
So I write following code, and this picture is drawn on black background:

Am I doing something wrong, or it`s a bug?

"underdevelopment". Never counted with transparent Images yet.

Quick fix:

RichText/ParaPaint.cpp 141

Quote:
Image RichObjectImageMaker::Make() const
{
 ImageDraw iw(sz);
 iw.DrawRect(sz, White);
 object.Paint(iw, sz);
 return iw;
}

(It is not 100% correct, we should use current paper instead, but that fix is more difficult).

Mirek

Thanks, that helped!
Looking forward to "official" fixing this bug in future builds.
