How i can read formatted data, like:

1 2 1.2

without defined separators, from a stringstream class variable, ala STL, like:

```
stringstream dummy;
string strline;
int i,j;
float x;
```

```
dummy.str(strline);
```

```
dummy >> i >> j >> x;
```

Thanx!

You cannot. U++ way would be to GetLine into String, then use some parsing technique, usually CParser. A bit more verbose in this case, but much more flexible.

Mirek
