How i can read formatted data, like:

1 2 1.2

withou defined separators, from a StringStream class variable, ala STL, like:

```
stringstream dummy;  
string strline;  
int i,j;  
float x;
```

```
dummy.string(strline);
```

```
dummy >> i >> j >> x;
```

Thanx!

You cannot. U++ way would be to GetLine into String, then use some parsing technique, usually CParser. A bit more verbose in this case, but much more flexible.
