Hi.

I was looking for some alternatives to mainly QT, C# and java as cross platform GUI builder and stumbled across U++.

Being a bit annoyed with learning 1001 different libraries and languages I was a bit hesitant to try it out.

I was however pleasantly surprised.

This library ROCKS!

It makes things almost as easy as C#.NET while maintaining the speed and control of C++. Add to that a nice license, a pretty great IDE and you got me hooked!

I got some of that finger itch back even when tired from kids and a full day of work.

Fantastic work people!

I'm also enjoying learning and using U++.

Features like RectTracker are making the library a pleasure to use. And, the source code is making the library and editor easy to use. I was even able to fix the 'missing' Ctrl-Y to Redo a change.

I've started using the library for one smaller project, and plan to use it for a bigger project after that.

The only thing that I could ask for would be more documentation.

Excellent job; I am looking forward to learning more!
