With this code for a SqlArray:

```
userList.SetSession(*(G_STATE->GetPsqlSession()));
userList.SetTable(OPERADOR);
userList.AddKey(LOGIN);
userList.SetOrderBy(LOGIN);
userList.AddColumn(LOGIN,"Usuario de login");
userList.AddColumn(NOMBRE,"Nombre operador");
userList.AddColumn(CLASE,"Clase");
userList.Query();
```

I'm getting this SQL (in Log):

```
select LOGIN, LOGIN, NOMBRE, CLASE from OPERADOR order by LOGIN
```

Why two LOGIN fields in the query? Should be I think:

```
select LOGIN, NOMBRE, CLASE from OPERADOR order by LOGIN
```

I'm using U++ 2008.1 beta

Hernan

Because you have AddKey(LOGIN) and then AddColumn(LOGIN).

The simplest way how to avoid that is to remove AddKey. First array index is always considered a key.
