Subject: Precompiled headers?

I'm developing a database application in a dual 800-MHz Pentium III Xeon, 768MB system. I think compilation/linking times are good but not as good as I want.

I'm building with MSVC2008 express+UPP 2008.1 beta.

Any tips on how to increase build times?

MSVC precompiled headers???

thanks.

Genereally, "BLITZ" is faster (and similar to in the same time) than precompiled headers.

All right, I'll stay with BLITZ. Thanks Mirek.
