Subject: Giving the user a Page Setup dialog

I'm writing a program to quickly generate bingo cards from a word list and I want the user to have the ability to set the margins or choose paper orientation using the system's Page Setup dialog. I did some digging through the documentation and looked at the sources some for some hints, but found none. Does U++ have methods to do this? If not, are there any good tutorials on the Windows printing API that someone could point me to? I'd certainly appreciate any help that could be offered.
