Subject: SetCurrentDirectory()
Posted by nixnixnix on Tue, 18 Mar 2008 22:43:34 GMT

Hi there,

I find that SetCurrentDirectory() is not found when I try compiling with SVN187 under ubuntu 7.10.

My fix: I write my own dummy SetCurrentDirectory() and it compiles fine.

Next problem: the linker says that SetCurrentDirectory() is already defined.

What's going on?

Also I appear to have a similar problem with plugin/bmp - the linker keeps saying that there are multiple definitions of functions.

Nick

Hard to say. Make sure you use "Use shared libraries" in Output mode and also try "Rebuild all" ("bomb").\
