Subject: TheIDE bug in layout designer? Posted by rochk on Wed, 26 Mar 2008 14:06:39 GMT View Forum Message <> Reply to Message

Well - I am not sure if I get correctly the way in which layout designer is supposed to work - but it offers non existing methods for some of the widget controls. Two which I checked are StaticRect and GridCtrl. In case of the first one it displays SetInk() method which is not defined for StaticRect (Color() is the method to change its color). The layout compiles correctly only if you do not change the properties of the control in the layout designer. When it comes to GridCtrl - checking and unchecking some of its properties in layout designer results in the compilation errors stating that some of the methods are not defined for that class. I have checked this only with U++ 2008.1 beta 2.

Regards, /Roch K.

Well, this is not really a bug in Layout designer, but in .usc script.

Thanks for report anyway, going to fix StaticRect part (Daniel will hopefully fix GridCtrl).

That's possible some of GridCtrl's methods listed in usc file are outdated. I'll check them. Thx for reporting this.

Strange, there is no StaticRect defined for layout designer

Anyway, I have taken the chance to fix StaticText:)

Yes - I know. I put StaticRect in my layout through 'User class' menu option. I have read somewhere that only most common controls are supported directly in layout designer and that is the way to do it. Maybe that is why the layout designer offers SetInk() method which is Ctrl class member I guess. And that is why it does not work with StaticRect... But - why does layout designer offer such option at all in case of custom controls?

Those may be silly questions and explanations - I am still a complete greenhorn when it comes to U++ design...

The lines: Font SetFont = StdFont(); Color SetInk = :SBlack; should be moved from Base to LabelBox. Mirek,

It seems to me that CtrlLib.usc could do with a thorough audit given that CtrlLib sees quite stable and there are obviously some problems. I could this for you if you emailed me you're latest version.
