Where is demowin1 from archive ?
Nice to have one more article about U++. Have anyone entire article? In english maybe...
U++ is compared with Boost, I think U++ isn't make heavy usage of templates like boost libraries
and isn't so generic-programming oriented. Compared with wxWidgets, also U++ use macros for
some parts of code but not like wxWidgets use them(for messages map), macro means every
instruction passed to preprocessor, no? So at the end every #include is a macro...

Info: Article was written in Jan. 2008

Looks to be a nice article, but I cannot read the whole article from that page. At least, the graphic
looks like there's more of an article in the paper magazine than the online magazine.

Still, it looks very complimentary of Ultimate++, as best as my limited French permits translation.

Yes this article was complimentary about Ultimate++. In the paper version, there were some little

examples to show some ultimate++ features. Other people in my firm have read it but have not tried Ultimate++

Like you can see, it's english which is limited for me
