Subject: GetHWND() always returns NULL?

Under Windows, GetHWND() always returns NULL. How can I get the HWND of a control?

I've tried to get the handle during the control constuctor, during a Paint, and during the constructor for the App.

You can't. Ctrls do not have HWND

Only top-level Ctrls have one or DHCtrl derived widgets (like GLCtrl).

Any suggestions on working with a library that can draw video to a window?

DHCtrl.

It is special Ctrl intended to serve as base class for widgets that require having HWND.

Check GLCtrl, IMO similar situation.

Thanks. That worked great, even as a control within a tab.
