In Wich release is realized this?
With respect, john.

With respect, john.

I am posting changes here as soon as they are realized in the code. That means that at the moment of post it goes to current primary repository (which is "uvs2" repository mostly for historic reasons). Later, usually withing 1-3 days mdelfe performs export of this repository to sf.net SVN repository and often also makes Linux release, which is being announced in the forum.

How I can download from "uvs2" repository!
John.
