Subject: bugs in beta1
Posted by aftershock on Sat, 17 May 2008 18:23:15 GMT

Hi!

I think I found couple of bugs.
Bug 1.
I selected the menu create makefile.
The makefile created was made for "c++" compiler while my current compiler was CL.
Bug 2.
It tried to compile addressbook example with msvc8 but the C++ compiler crashed when compiling the richtext control or similar.
I know it is Microsoft bug but just I wonder if you could change
the code so it compile it.
I tried mscv9 with the same result.
(I am on Windows XP)

Could someone acknowledge that you acknowledge this error and you will fix it?

Regards

Aftershock

Well, these makefiles are rather "raw material" expected to be fixed.... OTOH, c++ vs cl is perhaps something to fix.

I bet you had "RELEASE" with "BLITZ". It is well known problem. And it is quite harmless,
because this combination leads to long final .exe anyway. BLITZ is for debugging, not for
releasing...

Hemmmm.. in debian SVN builds I always use blitz to spare time... and the resulting exe is ok
both in length and in speed.
Is it a windows problem only ?

Max

It may be because I encountered this with the Microsoft compilers only.

In GCC there seems to be no problem, except the binary size.

Please try nonBLITZ release build and compare the size with BLITZ build.
