SystemLog messaging class has been updated.
Changelog :

1 - Changed log level names, adding an 'L' in front of them,
    this avoids name clashes with some windows macros (sigh)
    Sorry for any inconvenience, but users must update code.

2 - added line buffering, this allows to concatenate output on
    a single log line with operator <<, line termination should
    be indicated with "\n" as usual.
    Current line is also terminated by changing active log level.

3 - Added a small console app sample

4 - Updated documentation because of changes in point 1

Ciao

Max

p.s.: mrjt, please test it on windows, it whould work, but I did
make some major changes because of buffering...

Max

I've run the test and everything worked as expected. Good job

One very minor change was nessessary to compile it (Flush declared void but was returning a
value on the Win32 path), so I've committed it to the SVN.

Cheers!

Perfect !
Thanx for testing

Max
