Hello,

when doubleclicking the titlebar to maximize the topwindow, the click message is send into the maximized window.

System: 2008.1 beta Win32 XP SP2

greetings  
loki

Damned windows, they simply send that mouse-up message....

Well, this seems to fix the problem:

CtrlCore/Win32Proc.cpp 206:

```
case WM_NCLBUTTONDOWN:  
case WM_NCRBUTTONDOWN:  
case WM_NCMBUTTONDOWN:  
    ClickActivateWnd();  
    IgnoreMouseUp(); // <<< this is new  
    break;
```

(the question is what problems it can cause

Mirek

Thanks.

Quote:(the question is what problems it can cause Smile

Working with a not finished program results in losing data because I had not implemented some "Want you save first" prompt to the command which was executed by the LEFTUP message. .

I meant what other problems the FIX can cause

I really do agree that the problem is real and must be fixed...

Mirek
