Well, while perhaps this is more "politically correct", in the Assist, the items were a lot better looking with Arial font.

Do you think it would bother you a lot if I would move this back to Arial and only adjusted the height?

I supposed the problem you were solving was that with large fonts in Win32, the size was kept small (have you bought 1920x1200 monitor recently?)

Almost I'm forced to work with my laptop which has 1920x1200 resolution on 15,4 " screen (this is simply stupid..) and I have changed dpi from 96 to 120. Then all assist items were too small and looked bad especially if list next to members list uses politically correct font (PCF . The best solution would be if that font could be personalized in environment->fonts menu. So please change StdFont with Arial with proper height and if I find some time I will make it configurable in theide.
