Subject: Wp64 command line option not needed

Hi,

the command line option Wp64 is not needed on 64 bit Windows with MSC compiler as it is automatically enabled on Win64. Also it gives hundreds of warnings if used:

cl : Command line warning D9035 : option 'Wp64' has been deprecated and will be removed in a future release

This option is set in ide/Builders/MscBuilder.cpp on line 79.

I think this option should be removed from there.

Well, can you confirm that after removing, everything works with MSC9 and Vista64?

Mirek

I have tried it and everything works as before, but with fewer warnings

Things that still don't work for me in combination with 64bit Windows is:

compiling with 32bit TheIDE a 64bit Application and start it with the debugger -> TheIDE crashes
(the compiling and the application are working, just executing with the debugger crashes TheIDE)
compiling with 64bit TheIDE a 64bit Application and start it withe the debugger -> breakpoints don't really work
compiling with 64bit TheIDE a 32bit Application and start it with the debugger -> works as long as there are no breakpoints
