Hey Daniel,

I use very large grids and I'd like my users to be able to copy and paste the whole thing to excel or openoffice. Would it be a lot of work for you to add a CopyAll() function which would look at the current size of the grid and copy everything in it (text and values) to the clipboard please?

Nick

Ok, but this must wait until next weekend (I have planned small vacations).

Maybe this help to you :

```
.....
GridCtrl ar;
.....
vmr2.ar.WhenMenuBar=THISBACK1(SubMenuGC,&(vmr2.ar));
.....

void SubMenuGC(Bar& bar,GridCtrl* pod1) { bar.Add(pod1->GetCount(),"Export to
clipboard",TImgVaV::copy() , THISBACK1(KopirovanieGC,pod1)).Help("Export to
clipboard").Key(K_CTRL_C);
.....
bar.Add(IsClipboardAvailableText(),"Paste from clipboard",TImgVaV::paste() ,
THISBACK2(PasteGC,pod1,false)).Help("Paste from clipboard").Key(K_CTRL_V);
```

```

.....
}

void CopyAllGC(GridCtrl* pod1)
{
    WString txt;
    int i,first=0;

    if(pod1->GetCount()>0)
    {
        i=pod1->GetColumnCount();
        if(!pod1->IsSelection() && pod1->GetSelectedItemsCount()>0)
        {
            for(int y=0;y<i;y++)
            {
                txt.Cat((first?"\t":""));
                first=1;
                txt.Cat(pod1->GetColumn(y).GetName().ToWString());
            }
            txt.Cat("\r\n");
        }
        for(int z=0;z<pod1->GetCount();z++)
        {
            first=0;
            for(int y=0;y<i;y++) // if(pod1->IsSelected(z,y))
            {
                txt.Cat((first?"\t":""));
                first=1;
                txt.Cat(pod1->Get(z,y).ToString().ToWString());
            }
            if(first) txt.Cat("\r\n");
        }
        WriteClipboardUnicodeText(txt);// WriteClipboardText(txt.ToString());
    }
}

```

Thanks Pepe,

I'll give it a shot.

Cheers,

Nick

Nick

Done. I added Copy(bool all) and CopyAll(). If all is not true only selected cells are copied to the clipboard.

Thanks Daniel,

Will check it out on the next beta.

Nick
