I'd be gratefull if someone could give me an example of sch -file with multiple tables specified.
Seems that I can't create one properly.

```
TABLE_(SIMPLE_TEST1)
   INT_    (ID) PRIMARY_KEY
   STRING_  (NAME, 200)
   STRING_  (LASTNAME, 200)
   INT_    (BDATE)
END_TABLE
TABLE_(SIMPLE_TEST2)
   INT_    (ID) PRIMARY_KEY
   STRING_  (NAME, 200)
   STRING_  (LASTNAME, 200)
   INT_    (BDATE)
END_TABLE
```

won't work

END_TABLE
TABLE_(SIMPLE_TEST2)
   INT_    (ID) PRIMARY_KEY
   STRING_  (NAME, 200)
   STRING_  (LASTNAME, 200)
   INT_    (BDATE)
END_TABLE
```

won't work

The culprit is the '_' - you can use it only with the first appearance of name, it is a "signal" to

create SqlId constant for the name.

While I do not exactly like this issue, the only alternative is to provide manual declaration of all database names.
