A short google search looks like typeinfo is C++ compiler file for RTTI support.
This looks like your C++ compiler is broken (what OS, what compiler? The Windows + included mingw from U++ (should work) or some different one?).

For example a common path of the include file may look like this:
c:\upp\mingw\lib\gcc\mingw32\4.3.0\include\c++\typeinfo

In case the file exists on disk, you may have set up some paths wrong in build methods (.bm file in U++ directory can help to answer this)
