Subject: Wrong action in debug mode of ide FreeBSD [BUG][FIXED?]

Hi,

604b4 under FreeBSD 6.0

Trying to work in debug mode in ide. Press Debug tab in the right bottom corner with a bug icon.

Any action done in Debug tab throws me to console tab. E.g. I press Locals and get to Console, or I enter a new variable to Watches and again get to Console.

Win and Linux version work OK.
Will investigate the question further.

In a whole debugging works strange under FreeBSD.

I believe you. My guess is that you are the first one testing it

Mirek

You are so quick in answers
I was late deleting "In a whole debugging works strange under FreeBSD"....

The same "strange" thing I have found now on Linux.

May its because I have done wrong installation steps.
I have made a link /home/user/upp to the folder '/somewhere/upp602rc' where the upp source distribution was extracted.

The problem is that I think that ide is confused with files /home/user/upp/.../anyfile1.cpp and /somewhere/upp602rc/.../anyfile1.cpp

I have found that if some source file is in location which contains a link, then ide considers two different files.
E.g. I have in the root folder I have /home which is a link to /usr/home.
And then in ide I may have two files /home/user/upp/examples/Button/Button.cpp and /usr/home/user/upp/examples/Button/Button.cpp
When I debug ide shows both files and debug steps works only in the file with the full path without links.

After I have put upp distro to /usr/local/share/upp everything became ok and I have not encountered a bug I have written before with clicks on Locals, Auto.

So I guess there is something wrong when we have sources in the location which contain symbolic links.

The issue with a link was tested on both Linux and FreeBSD.
