hi all,
I am developing a print application to print multiple postscript/PDF files. Application will have a file list to which user can add multiple file. Application will have two buttons
1. Add files
2. Print files
3. Print files in reverse page order (last page first)
4. select printers.

Now my doubt is how can I send multiple files to the printer . PS/PDF files contains formatting information, so i dont want to use
printer dialog.

Thanks and Regards,
uttam hoode
