I've got another strange issue from SQLite.

First, I add new table: create table if not exists perevod0 (p0 COLLATE NOCASE, p1 COLLATE NOCASE, p2 COLLATE NOCASE, p3 COLLATE NOCASE, p4 REAL, p5 INTEGER, p6 INTEGER, p7 COLLATE NOCASE, p8 COLLATE NOCASE, p9 COLLATE NOCASE, p10 COLLATE NOCASE, p11 COLLATE NOCASE)
and it works.

Then I add some records: insert into perevod0 (p0, p1, p2, p3, p4, p5, p6, p7, p8, p9, p10, p11) values ('1', '1', '1', '1', '1', '1', '1', '1', '1', '1', '1', '1') and it works too.

But when I try to acquire added records: select all from 'perevod0' or select all from perevod0 -- all I have is error

Quote:ERROR near "from": syntax error(0): Preparing: select all from perevod0

As far as I know, such a primitive query should be executed without problems. Can anyone tell what is wrong and how to solve it?
