Subject: missing features: references etc.

Hi,
Ultimate++ is an impressive piece of work, but what I'm really missing is
a) a function for finding all references of a method
b) an "adding class" wizard that supports me by creating a .cpp as well as a .h-file
c) an "add method" wizard that writes the new method in the appropriate .cpp and .h file.

Is it realistic to dream about realisation?

Regards
max meier

About c) wish I propoused text template!
This mechanism can be use in class wizard too!

I do not see much gain in "add method", as compared to current "Copy as declaration / definition".

Mirek

Hi!

Also missing for context menu on right click:
1) Open the document on #include.
2) Go To Definition and Go To Declaration.

Regards
Dmitriy P.

1) yes please *bashing my head into wall*, especially if it will be able to use compilation paths, i.e. show the correct header even in case there are several different copies on different paths.

2) Alt+I and Alt+J if I recall correctly? Check in Assist menu.
I have been suggesting to adding everything what can be used into context menu, but I was put down by Mirek.

And while I love preprocess feature, in some very very rare occasions I would welcome also assembler output (with gcc only? I think MSVC does not allow this).

And so on... I think TheIDE can use tons of little improvements, but I think right now the 2008.1 should be released, and than the C++ parser improved considerably, as the current version is not very reliable, at least on my sources.

Also missing for context menu on right click:
1) Open the document on #include.

I think this should work on Alt+J too, correct?

Mirek
