Subject: ubuntu 8.04 problems?

I downloaded and installed upp_0pre.2008.1-rc2_i386.deb in Ubuntu hardy haron. I run theide and select the Examples Assembly and the Addressbook package.

I select gcc Optimal and build and I get missing symbol errors:

(.text+0xfcd): undefined reference to `XCompositeQueryExtension'
/usr/lib/gcc/i486-linux-gnu/4.2.3/../../../../lib/libgdk-x11 -2.0.a(gdkdisplay-x11.o): In function `gdk_display_open':
(.text+0xff4): undefined reference to `XDamageQueryExtension'
/usr/lib/gcc/i486-linux-gnu/4.2.3/../../../../lib/libgdk-x11 -2.0.a(gdkevents-x11.o): In function `gdk_event_translate':
(.text+0x2e3b): undefined reference to `XDamageSubtract'
/usr/lib/gcc/i486-linux-gnu/4.2.3/../../../../lib/libgdk-x11 -2.0.a(gdkwindow-x11.o): In function `_gdk_windowing_window_set_composited':

..... others cut .....

Am I missing a package?

Have you selected "Use shared libs" in Output mode option for optimal builds ?

I wonder why "All static" option is still active? This was discovered about 10 builds ago and is still a problem.
Recently I`ve rebuilt TheIDE under FreeBSD from latest SVN sources and got the same wrong option active by default.

No I hadn't. I thought it was enough to have shared libs selected in Setup|Build methods...

Is there a way to not have theide default to static libs for each package?

Well, I did check the debian package and GCC.bm (which sets default link mode) is ok.
Maybe you had an old .upp/theide-svn folder ? It it was already there, the installer don't replaces it, in order to keep user options.

Max

EDIT : BTW, installing directly from svn sources doesn't set the default GCC.bm as debian package... I guess there's something in installer to adjust.

Max

Yes, in Build methods...
