Hello,
    this is my first post. I hope it will be in correct site
I'm now starting with Upp++ but I know about it many time before. I use to develop in database
environments and I would like to know if there is any project or idea about including Firebird
access in Upp++. If it's not so and I it could be nice and interesting, perhaps it would be a good
project.

Thanks for all and what great product is Upp++!

Juan.

I remember somebody posting about creating a Firebird plugin - AFAIK nothing really materialized
so far.

Doing this is not very complicated usual. Use MySQL and Sqlite packages as tutorials

I think that this weekend I am going to look at it in detail close to the beach
I need to learn more in detail Upp+ but I think that it is a good beginning to try to create a Firebird
plugin.

Juan.

Is there any prospect? Is there any Firebird integration done or not? I also need to write UPP
application for Firebird SQL.
