hello again

i want to do some threading and what i understanded is that threading is very easy

all what i want is to call a function and it will work as a thread

like that

```
Thread my_thread;
my_thread.Run(download_cisn);
```

but i dont know why this error comes ??
c:\myapps\cisnotifier\CISNotifier.h(103) : error C2065: 'Thread' : undeclared identifier
c:\myapps\cisnotifier\CISNotifier.h(103) : error C2146: syntax error : missing ';' before identifier 'my_thread'

1. Check if you included <Core/Core.h>
2. Check if your configuration (top-leftmost drop box) - contains "MT". Usually it is "GUI" by default. To do multithreading you should change it to "GUI MT". To do this, click on this and press Insert, entering new line.

Is everything OK?

thanks .....but there is another error appered

```
Thread my_thread;
my_thread.Run ( test );
```

this is the error

c:\myapps\cisnotifier\CISNotifier.h(101) : error C3867: 'CISNotifier::test': function call missing argument list; use '&CISNotifier::test'
  to create a pointer to member

Are you passing a callback?

It should probably be:
thread.Run(THISBACK(test))
