Is it possible to display tabs at bottom of the TabCtrl instead of Top ?

cocob

TabCtrl doesn't seem to support this. Use QuickTabs instead.

QuickTabs are dead The plan is we (ok that's only me right now) want to use TabBar in TabCtrl so it will be able to have tabs from any side (and it will be supporting tabs drag and drop by the way).

QuickTabs are dead

Long live the TabBar!

Sorry
