
Subject: Upp 2008.1 released
Posted by [unodgs](#) on Mon, 28 Jul 2008 06:35:10 GMT
[View Forum Message](#) <> [Reply to Message](#)

Here it is, long-awaited 2008.1 release. Please check if everything is correct.
Changes since 2008.1rc2:

fixed problem with default "Static link mode" in linux (despide being set "Shared link mode"
"recent change" underlines in package are now limited to files newer than ConfigFile("version").
This way, all u++ sources are not underlined just after the install

Subject: Re: Upp 2008.1 released

[View Forum Message](#) <> [Reply to Message](#)

I got the following error after updating to 2008.1:

```
c:\upp\uppsrc\richtext\txtop.cpp(54) : fatal error C1001: An internal error has occurred in the
compiler.
(compiler file 'f:\dd\vctools\compiler\utc\src\p2\main.c[0x51144100:0x0000002C]', line 182)
To work around this problem, try simplifying or changing the program near the locations listed
above.
Please choose the Technical Support command on the Visual C++
Help menu, or open the Technical Support help file for more information
Internal Compiler Error in C:\Programme\Microsoft Visual Studio 9.0\VC\Bin\cl.exe. You will be
prompted to send an error report to Microsoft later.
```

Again the old Hydra-Problem?

c:\upp\uppsrc\richtext\txtop.cpp(54) : fatal error C1001: An internal error has occurred in the
compiler.
(compiler file 'f:\dd\vctools\compiler\utc\src\p2\main.c[0x51144100:0x0000002C]', line 182)
```

To work around this problem, try simplifying or changing the program near the locations listed above.

Please choose the Technical Support command on the Visual C++

Help menu, or open the Technical Support help file for more information

Internal Compiler Error in C:\Programme\Microsoft Visual Studio 9.0\VC\Bin\cl.exe. You will be prompted to send an error report to Microsoft later.

Again the old Hydra-Problem?

Nope. Again the BLITZ in optimal mode.

BTW, have you activated BLITZ for optimal or is this the preset setting?

Mirek

[View Forum Message](#) <> [Reply to Message](#)

Blitz IS disabled for Release-Mode.

And in Debug-Mode i got this one:

Linking...

mysqlclient.lib(my_winthread.obj) : error LNK2001: unresolved external symbol __db_doprnt_

mysqlclient.lib(mf_loadpath.obj) : error LNK2001: unresolved external symbol __db_doprnt_

mysqlclient.lib(my_getwd.obj) : error LNK2001: unresolved external symbol __db_doprnt_

mysqlclient.lib(my_once.obj) : error LNK2001: unresolved external symbol __db_doprnt_

and so on...

I confused... every time i update to a new UPP-Version there are some compiler-, linker-, or path-problems.

After uninstallation and performing a new installation of Ultimate++ the error is fixed.

But the Ultimate-Setup did a unistallation of the old version. Seems that there is a problem.

Next time i will do a complete uninstallation before new installation.

Settings in Build methods are just defaults. Important is setting in Output mode.

Anyway, never mind. Let us consider this resolved....

Mirek

Win seems to be OK. How about deb builds? Are they the one from a previous post or should we wait for new builds?

And would like me to package a rpm? Maybe one without any dependencies?

cbpporter wrote on Mon, 28 July 2008 19:24 Win seems to be OK. How about deb builds? Are they the one from a previous post or should we wait for new builds?

deb builds should be ok, dependencies for Lenny are fixed.

Ciao

Max

I'm trying the 2008.1 install under WXP:

The old tiny problems I was reporting with SVN builds are still remaining
http://www.ultimatepp.org/forum/index.php?t=msg&&th=3534&goto=16338#msg_16338 :
- after installation when the build methods are detected by that wizard, the SDL directory is not pre-filled. Why not? It's installed anyway in \$installdir/sdl
- the included SDL lib is 1.2.13, but at official download page of U++ there's only 1.2.12 package.

new things I wonder about:

- no bazaar Assembly in Select main package? Why, I though it will be preset there as it's half way official. (I don't mind I have to add it to MyApps assembly by hand, that's ok, I mean the standalone "bazaar" assembly just as we have examples/tutorial/...)

Memory leaks detection works out of box with MINGW now (didn't work for me with some previous version I was using, I'm sorry, but I'm not sure which one it was as I did play with SVN and RCs before). (see edit)

So far works for me. Also I sort of miss my TheIDE settings, after every uninstall/install I'm back on defaults, that does apply to Assemblies too. It's no big deal, I can set it up back in couple of minutes, but I would prefer if the settings would be preserved somehow.

EDIT:

The memory leaks detection works out of box with MSC8 for me, with MINGW it does not work. If I force it on by using "atexit(UPP::MemoryDumpLeaks);", I get several leaks in core console application, that's the similar to way how my previous version of UPP did work. Any chance the MINGW version will support memory leaks detection too in future?

Also the previous "memory breakpoints" of those UPP leaks under MINGW were scattered around 30-48, now with 2008.1 they are scattered at 60-574 and there's like 4 times more of them. It makes me feel a tad uncomfortable, to know that there's well over 580 memory allocations before my first statement in CONSOLE_APP_MAIN does execute. It's not like the app init is slow, so it's reasonable, but still makes me a bit wonder. Maybe I will look into it one day to know what's going on under hood.

Under MINGW with -Wall I do get also:
C:\upp\uppsrc\Core\dli.h:1: warning: ignoring #pragma BLITZ_APPROVE
I think I can safely comment it out by "//" to make the warning vanish, and the BLITZ will find it, but I wonder why this one remained uncommented. Is dli.h generated, or it just escaped the hunt for BLITZ_APPROVE pragma?

Correct, thanks.

So, time to announce release everywhere? Or are we waiting for something?

Maybe we'll wait a little bit with that. I'm posting 3 bug reports right now.

Maybe we'll wait a little bit with that. I'm posting 3 bug reports right now.

Actually, if they are not *really* serious, we will proceed anyway.

For now, FreeBSD port can be found here (until it is finally included into ports tree):
<http://www.freebsd.org/cgi/query-pr.cgi?pr=ports/126226>

Actually it is only a diff to be applied to current port.

I assume it will take 1 or 2 weeks before it is available.

There is a problem with .deb package on Ubuntu Hardy. The package depends on gcc-4.1, but Hardy has gcc-4.2 and cannot install this .deb.

trustmaster wrote on Fri, 08 August 2008 02:43There is a problem with .deb package on Ubuntu Hardy. The package depends on gcc-4.1, but Hardy has gcc-4.2 and cannot install this .deb.

You have to enable all repositories.

(We had to stick with gcc-4.1 because gcc-4.2 has confirmed bugs that prevent U++ to work).

FreeBSD port is now in the ports tree.

It can be configured to also install the following packages if needed:

- GL
- SDL
- MySQL
- PostgreSQL

A dialog opens up asking for these options, they are deactivated by default.

For future releases I plan to also offer the ability to build TheIDE without using GTK (flag with NOGTK).

BTW, I uploaded port directory to SF, shall I remove it again?

mr_ped wrote on Tue, 29 July 2008 17:05 I'm trying the 2008.1 install under WXP:

- after installation when the build methods are detected by that wizard, the SDL directory is not pre-filled. Why not? It's installed anyway in \$installdir/sdl

File uppsrc/ide/AutoSetup.cpp line 105 is:

```
String sdl = NormalizePathNN(ConfigFile("SDL-1.2.9"));
```

But the simple "sdl" directory name is created by installer, so this change will fix the auto-detect:

```
String sdl = NormalizePathNN(ConfigFile("sdl"));
```
